# **CS23336-Introduction to Python Programming**

**Started on** Friday, 18 October 2024, 9:30 PM

Finished State

Completed on Monday, 21 October 2024, 10:10 PM

**Time taken** 3 days

Marks 10.00/10.00

**100.00** out of 100.00 Grade

# **Question 1**

Correct Mark 1.00 out of 1.00 Flag question

#### **Question text**

Assume you have an array of length n initialized with all 0's and are given k update operations.

Each operation is represented as a triplet: **[startIndex, endIndex, inc]** which increments each element of subarray **A[startIndex ... endIndex]** (startIndex and endIndex inclusive) with **inc**.

Return the modified array after all k operations were executed.

Input:			

**Example:** 

3

5

132

243

02-2

#### **Output:**

# Initial state: length = 5, updates = [[1,3,2],[2,4,3],[0,2,-2]] [0,0,0,0,0] After applying operation [1,3,2]: [0,2,2,2,0] After applying operation [2,4,3]: [0,2,5,5,3] After applying operation [0,2,-2]:

Answer:(penalty regime: 0 %)

[-2,0,3,5,3]

**Explanation:** 

```
1 n=int(input())
2 k=int(input())
3 o=[]
4 + \text{for i in range(k):}
5
         o.append(list(map(int,input().split())))
6
   lst=[0]*n
    diff=[0]*(n+1)
8 for op in o:
         start, end, inc=op
10
         diff[start]+=inc
11 -
         if end+1<n:</pre>
12
             diff[end+1]-=inc
13
    lst[0]=diff[0]
14 \rightarrow \text{for i in range}(1,n):
15
         lst[i]=lst[i-1]+diff[i]
16 - for i in lst:
        print(i,end=' ')
```

#### **Feedback**

Input Expected

```
5
3
1 3 2 -2 0 3 5 3 -2 0 3 5 3
2 4 3
0 2 -2
```

Got

Question 2
Correct Mark 1.00 out of 1.00 Flag question
Question text
Given a matrix mat where every row is sorted in <b>strictly increasing</b> order, return the <b>smallest common element</b> in all rows.
If there is no common element, return -1.
Example 1:
Input:
45
12345
2 4 5 8 10
3 5 7 9 11
13579
Output:
5
Constraints:
<ul> <li>1 &lt;= mat.length, mat[i].length &lt;= 500</li> <li>1 &lt;= mat[i][j] &lt;= 10^4</li> <li>mat[i] is sorted in strictly increasing order.</li> </ul>
Answer:(penalty regime: 0 %)
<pre>row, col=map(int,input().split()) matrix=[list(map(int,input().split())) for i in range(row)] count={}</pre>

Passed all tests!

Marks for this submission: 1.00/1.00.

Correct

```
4 for elem in matrix[0]:
        count[elem]=1
6  for i in range(1, row):
7 .
        for elem in matrix[i]:
             if elem in count and count[elem]==i + 1 - 1:
9
                 count[elem]+=1
10
    smallestcommonelement=1
11 + \text{for elem in matrix}[0]:
12 -
        if count.get(elem)==row:
13
             smallestcommonelement=elem
14
             break
15
    print(smallestcommonelement)
```

#### **Feedback**

4 5 1 2 3 4 5 2 4 5 8 10 5 5 3 5 7 9 11 1 3 5 7 9

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.

### **Question 3**

Correct Mark 1.00 out of 1.00 Flag question

#### **Question text**

Determine the factors of a number (i.e., all positive integer values that evenly divide into a number) and then return the  $p^{th}$  element of the list, sorted ascending. If there is no  $p^{th}$  element, return 0.

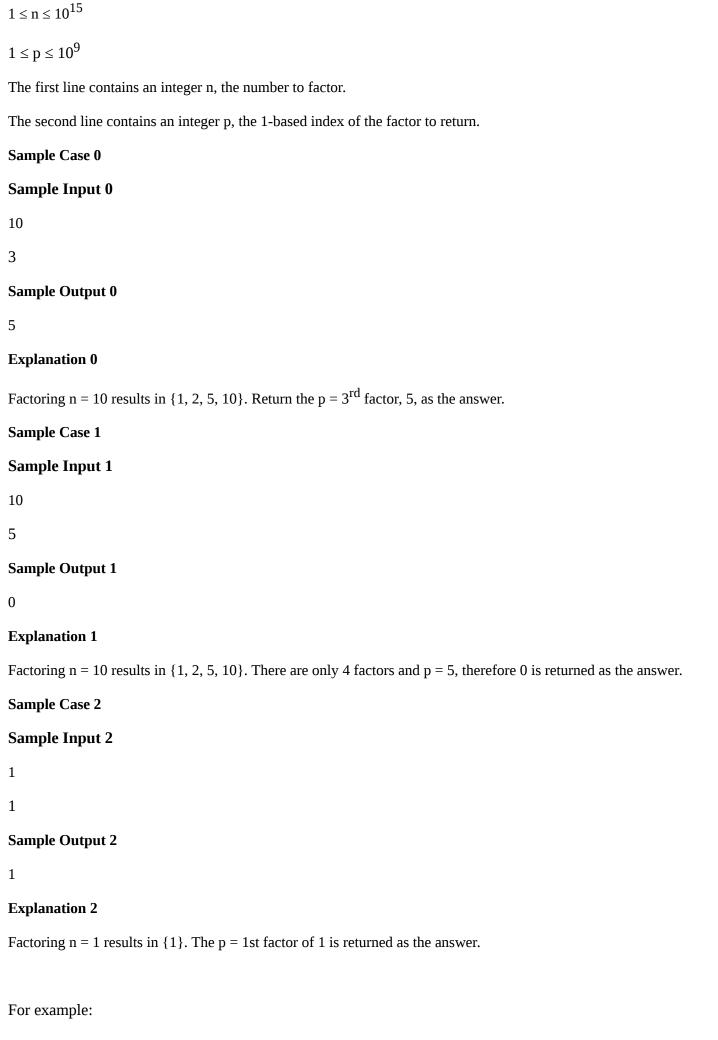

#### **Example**

```
n = 20
```

$$p = 3$$

The factors of 20 in ascending order are  $\{1, 2, 4, 5, 10, 20\}$ . Using 1-based indexing, if p = 3, then 4 is returned. If p > 6, 0 would be returned.

#### **Constraints**

```
Input Result
10
3
      5
10
```

0

1

Answer:(penalty regime: 0 %)

```
1 a=int(input())
b=int(input())
3 1=[]
4
   C=0
5 + \text{for i in range(1,a+1):}
        if a%i==0:
 7
            C=C+1
            1.append(i)
9 + if c >= b:
        print(l[b-1])
10
11 - else:
12
        print(0)
```

# **Question 4**

Correct Mark 1.00 out of 1.00 Flag question
Question text
Program to print all the distinct elements in an array. Distinct elements are nothing but the unique (non-duplicate) elements present in the given array.
Input Format:
First line take an Integer input from stdin which is array length n.
Second line take n Integers which is inputs of array.
Output Format:
Print the Distinct Elements in Array in single line which is space Separated
Example Input:
5
1
2
2
3
4
Output:
1234
Example Input:
6
1
1
2
2
3
3
Output:

3
3
3
```

Passed all tests! Correct Marks for this submission: 1.00/1.00.

#### **Question 5**

Correct Mark 1.00 out of 1.00 Flag question

#### **Question text**

Given two arrays of positive integers, for each element in the second array, find the total number of elements in the first array which are less than or equal to that element. Store the values determined in an array.

For example, if the first array is [1, 2, 3] and the second array is [2, 4], then there are 2 elements in the first array less than or equal to 2. There are 3 elements in the first array which are less than or equal to 4. We can store these answers in an array, answer = [2, 3].

#### **Program Description**

The program must return an array of m positive integers, one for each maxes[i] representing the total number of elements nums[j] satisfying  $nums[j] \le maxes[i]$  where  $0 \le j < n$  and  $0 \le i < m$ , in the given order.

The program has the following:

nums[nums[0],...nums[n-1]]: first array of positive integers maxes[maxes[0],...maxes[n-1]]: second array of positive integers

#### **Constraints**

- $\cdot 2 \le n, m \le 10^5$
- ·  $1 \le nums[j] \le 10^9$ , where  $0 \le j < n$ .
- $1 \le maxes[i] \le 10^9$ , where  $0 \le i < m$ .

Input Format For Custom Testing

Input from stdin will be processed as follows and passed to the program.

The first line contains an integer *n*, the number of elements in *nums*.

The next *n* lines each contain an integer describing *nums[i]* where  $0 \le i < n$ .

The next line contains an integer m, the number of elements in maxes.

The next m lines each contain an integer describing maxes[i] where  $0 \le i < m$ .

Sample Case 0

#### Sample Input 0

4 2

3

```
5
```

#### Sample Output 0

2

#### **Explanation 0**

We are given n = 4, nums = [1, 4, 2, 4], m = 2, and maxes = [3, 5].

- 1. For maxes[0] = 3, we have 2 elements in nums(nums[0] = 1) and nums[2] = 2) that are  $\leq maxes[0]$ .
- 2. For maxes[1] = 5, we have 4 elements in nums(nums[0] = 1, nums[1] = 4, nums[2] = 2, and <math>nums[3] = 4) that are  $\leq maxes[1]$ .

Thus, the program returns the array [2, 4] as the answer.

Sample Case 1

#### Sample Input 1

5 2 10

5 4

8 4

3

1

7 8

# Sample Output 1

1

3

#### **Explanation 1**

We are given, n = 5, nums = [2, 10, 5, 4, 8], m = 4, and maxes = [3, 1, 7, 8].

- 1. For maxes[0] = 3, we have 1 element in nums(nums[0] = 2) that is  $\leq maxes[0]$ .
- 2. For maxes[1] = 1, there are 0 elements in nums that are  $\leq maxes[1]$ .
- 3. For maxes[2] = 7, we have 3 elements in nums (nums[0] = 2, nums[2] = 5, and nums[3] = 4) that are  $\leq maxes[2]$ .
- 4. For maxes[3] = 8, we have 4 elements in nums(nums[0] = 2, nums[2] = 5, nums[3] = 4, and nums[4] = 8) that are  $\leq maxes[3]$ .

Thus, the program returns the array [1, 0, 3, 4] as the answer.

Answer:(penalty regime: 0 %)

```
1  n=int(input())
2  a=[int(input()) for i in range(n)]
3  m=int(input())
```

Marks for this submission: 1.00/1.00.

# **Question 6**

Correct Mark 1.00 out of 1.00 Flag question

#### **Question text**

Given an integer n, return an list of length n + 1 such that for each i ( $0 \le i \le n$ ), ans[i] is the number of 1's in the binary representation of i.

#### Example:

Input: n = 2

```
Output: [0,1,1]
Explanation:
0 --> 0
1 --> 1
2 --> 10

Example2:

Input: n = 5
Output: [0,1,1,2,1,2]
Explanation:
0 --> 0
1 --> 1
2 --> 10
3 --> 11
4 --> 100
5 --> 101
```

Note: Complete the given function alone

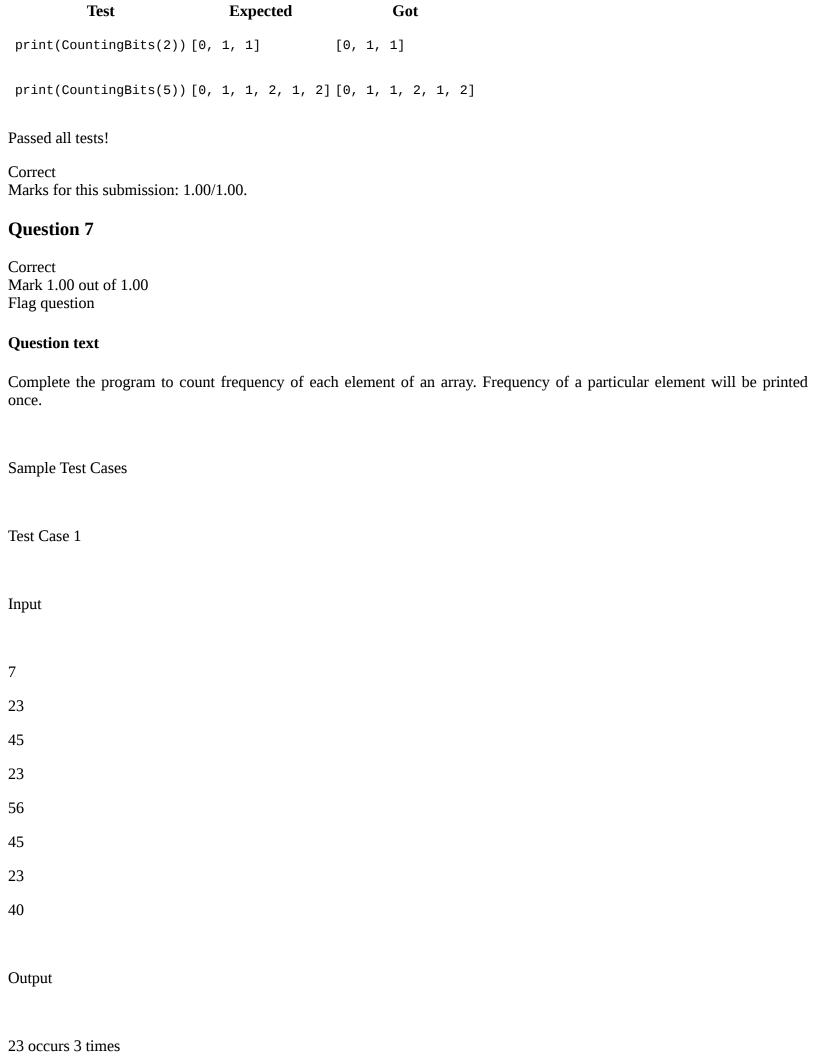

For example:

Test Result

print(CountingBits(5))[0, 1, 1, 2, 1, 2]

Answer:(penalty regime: 0 %)

#### **Feedback**

Question 9
Correct Mark 1.00 out of 1.00 Flag question
Question text
An array is monotonic if it is either <b>monotone increasing</b> or <b>monotone decreasing</b> . An array A is monotone increasing if for all $i \le j$ , $A[i] \le A[j]$ . An array A is monotone decreasing if for all $i \le j$ , $A[i] \ge A[j]$ .
Write a program if n array is monotonic or not. Print "True" if is monotonic or "False" if it is not. Array can be monotone increasing or decreasing.
Input Format:
First line n-get number of elements
Next n Lines is the array of elements
Output Format:
True ,if array is monotone increasing or decreasing.
otherwise False is printed
